Extra parts supplied in the Modem Kit:
1) 0.1 uF disc filter capacitor
2) Aluminum spacer (1/4”)
3) Eight nylon washers

Chassis Grounding Mod:
1) Scrape or grind off the blue solder mask on the bottom side of the pcb, at the mounting hole closest to the J2 Keyboard connector
2) Scrape or grind the inside of the chassis for the hole corresponding to that same mounting hole. This will then make good electrical contact with the aluminum 1/4” spacer provided

Insulate the metal spacers used for LCD:
(Only if metal spacers are provided.)
1) Place a nylon washer on the screw before inserting it from the bottom side of the pcb.
2) Place another nylon washer on the screw as it protrudes through to the top side of the pcb. The place the metal standoff on the screw and tighten it down.
3) Do this for the other three screws/metal standoffs.

Add filter cap across power jack pads
